Im use this document for setting transparent proxy:
http://tldp.org/HOWTO/TransparentProxy-6.html

My squid-box is VE103 with ip 192.168.100.103 via venet.
My iptables-box is VE0.

I'm try method 6.2, but it doesn't work. I'm add 'ip rule' and 'ip route' in VE0, and this part works fine. I'm check it with other hw-host.

But inside VE103 I'm cann't get any routed traffic. tcpdump output is empty.

/sbin/ip rule add fwmark 2 table squid
/sbin/ip route add default via 192.168.100.103 table squid

What's wrong?
