OpenVZ control panel for windows - http://downloads.qmailrocks.ru/vz/WOVZC.rar

It's currently in active developing process, so if you want some additional functions - just let me know.

Created for rpm-based distro, but may be used on others.

Screenshots:

Please post yours offers and remarks.

Looks like VPS Shell function created using putty and panel always ask for password(Even if I use public-key auth for that VE and password simply not needed for login)

Minor glith:putty encoding setup to it's default(KOI8-U) which looks espicially 'good' if VE uses UTF8.

You can change putty charset in real time by clicking on window title -> Change settings -> Translation
If you are using 'mc' - you have to reopen it or just resize putty window.

In future, it's better to run OVZ Cpanel without putty connection.
Like VMvare console is work.
I think its possible to realise ssh connection by OVZ Cpanel, no putty to use.

You doesn't right, it's hard to realise. But why you don't wanna use putty instead?

Hi,

very nice tool,

I tried it shortly and found 2 little bugs:

1) I use normally ssh keys for login.
My test maschine has no ssh-keys, so the program get these error message on several points in his window:

Server refused our key
Using keyboard-interactive authentication.

and the program tried to get this lines in his output instead of ignoring them

2) Conf templates tried to read /etc/sysconfig/vz-scripts/... (and "Server refudes our key" ^^). But I use gentoo/debian which haven't these directories.

Perhaps you can read the config from the central config file (in 3.0.13 tools it seems /etc/vz/vz.conf) ?

Greets

Reiner

Such a very amazing link!
Thanks you for the post.
