Hi,

I am having a problem here and I have been sourcing in this website for 6 hours already and still can't find the solution.

[root@svr ~]# ip route
1.1.1.134 dev venet0 scope link src 1.1.1.186

1.1.1.134 -> VE IP
1.1.1.186 -> Wrong gateway

The correct gateway should be 1.1.1.129

I manage to setup a working openVZ in another network and was up and running. Only encounter this problem when setting up in a datacenter..

Thanks for looking at this thread.

1.1.1.186 in the rule "1.1.1.134 dev venet0 scope link src 1.1.1.186" means source address, not gateway.
i.e. 1.1.1.186 is the IP address of your node.

I solved the problem. It is due some HN mis-configuration.

So sorry.
