Hello,

I'm interesting with this project and trying to install kernel :
kernel-enterprise-2.6.18-ovz028test007.1.i686.rpm.

My System is HP DL380 G5 with 2xXeon Dualcore, 16 GB Mem, 72G x 6 HD (SAS). There was an error when i'm installing using rpm, it said that no cciss module found.

Maybe somebody can help me how to include/load cciss module ?

Thanks for the answer.

Most disk drivers are compiled into OVZ kernel (not modules),
so warning is ok (there is no module, really). Just try to boot in to this kernel.

Great !! I can boot the kernel without any problem.
Thanks for fast response.

I'll give another feedback on testing.
