currently using:

Linux main-node-14.*mydomain*.com 2.6.9-023stab037.3-enterprise #1 SMP Wed Dec 13 19:46:33 MSK 2006 i686 i686 i386 GNU/Linux

Server dies frequently. I never had this issue until recently, the server is dieing about 2 times per day for no reason.

I am using hypervm and they said to contact you.

Thanks

Hi, the openvz team is definately interested in kernel oops. But, you have not given any information to investigate further. The first step is to capture the oops report using the following steps:

http://wiki.openvz.org/Remote_console_setup

Please paste the oops report in this thread or create a bugzilla.
