Subject: Install yum and lamp?

I'm trying to install VHCS control panel on my VPS server (virtuozzo)

Yum is not installed by default and I cannot get it to install

[root@italkhost root]# rpm -ivh yum-2.4.0-1.src.rpm
warning: yum-2.4.0-1.src.rpm: V3 DSA signature: NOKEY, key ID 69886cc7
1:yum warning: user skvidal does not exist - using root
warning: group skvidal does not exist - using root
warning: user skvidal does not exist - using root)
warning: group skvidal does not exist - using root
########################################### [100%]

I got that after creating the redhat directory.

All I am basically trying to do is get the following installed for my virtuozzo vps server (the vps I created, not the entire actual server itself)

- yum
- lamp (apache 2x, mysql 5.x, php 5.x)

If you can seriously show me how to do this I would appreciate it. Its driving me nuts. I'm not a pro, but I learn fast

I tried another rpm I downloaded and got this:

[root@italkhost root]# rpm -Uvh yum-2.5.1-1.noarch.rpm
warning: yum-2.5.1-1.noarch.rpm: V3 DSA signature: NOKEY, key ID 30c9ecf8
error: Failed dependencies:
libxml2-python is needed by yum-2.5.1-1
python(abi) = 2.4 is needed by yum-2.5.1-1
python-elementtree is needed by yum-2.5.1-1
python-sqlite is needed by yum-2.5.1-1
rpm-python is needed by yum-2.5.1-1
urlgrabber is needed by yum-2.5.1-1

Can someone please explain a quick and proper way of installing lamp as well? Thanks.

Specs:
Virtuozzo VPS
Centos 3

First RPM you wanted to install is actually a source rpm. You need to get binary RPM, not source RPM, and this is what you tried to install later, but with a little luck since yum requires some other packages.

To solve it nicely, use vzyum from inside your host system, i.e.
vzyum NNN install yum
where NNN is you VPS id.

As for lamp, it is not an actual package, but just an acronym for Linux, Apache, MySQL and one of Perl/Python/PHP (or, probably, all of them). Sure you already have Linux and (in default OS template) Apache so you need to install MySQL (vzyum NNN install mysql-server) and one of perl/python/php.

[root@server001 root]# vzyum 10001 install yum
-bash: vzyum: command not found

You should do it in host system, not inside a VPS. /sbin and /usr/sbin should be in PATH.

I did do it in host not vps and that is where I got the errors.

[root@server001 sbin]# locate vzyum

[root@server001 sbin]# updatedb
[root@server001 sbin]# locate vzyum
[root@server001 sbin]#

I have not done anything after the swsoft installed virtuozzo on this server

I did a locate and some showed

/usr/sbin/vzpkgrm
/usr/share/vzpkgtools

So it is Virtuozzo and not OpenVZ?

Sorry, we do not provide Virtuozzo support; please use official Virtuozzo support channel for that.

I'm sorry, I now see that you have mentioned virtuozzo in your first post.

Indeed, you should either try general linux support forums, or ask your virtuozzo provider (be it swsoft or any reseller) for support.
