Subject: Hawking PN652TX PCMCIA support

I was looking at the HCL for OpenVZ/Virtuozzo (networking) and didn't see support for the PN652TX PCMCIA card from Hawking. I believe it uses the pcnet_cs module.

This card was recognized after I installed CentOS 4.2 as the hardware node OS; however, upon installing and booting into the OpenVZ kernel (ovzkernel-2.6.8-022stab061.1.i686.rpm) the card was no longer recognized. Is it possible for me to somehow compile support for the card?

TIA!
