Thx ,i has try again and when i use this command
usr/local/sbin/vzctl create 101 --ostemplate fedora-core-5-i386-minimal --config vps.basic
Unable to open /dev/vzctl: No such file or directory
Please check that vzdev kernel module is loaded and you have sufficient permissions to access the file.

it show that.
I can't understand why pl tell me.Sorry cause if disturb you

I think it is easy to recompile the kernel for vps in FC6 . If you need a simple procedure you can follow the link,

http://sherin.110mb.com/vps/

thx the link is usefull i think i almost done it.But i dont know how to mount /vz or some thing like this
Unable to open /dev/vzctl: No such file or directory
Please check that vzdev kernel module is loaded and you have sufficient permissions to access the file.

I had done it but when i use vzvtl create 101
 it show this

Creating VE private area (fedora-core-4)
vzquota : (error) Quota getstat syscall for id 101: Inappropriate ioctl for device
vzquota init failed [3]
vzquota : (error) Can't open quota file for id 101, maybe you need to reinitialize quota: No such file or directory
vzquota : (error) Quota getstat syscall for id 101: Inappropriate ioctl for device
vzquota init failed [3]
vzquota on failed [61]
vzquota : (error) Can't open quota file for id 101, maybe you need to reinitialize quota: No such file or directory
vzquota off failed [11]
vzquota : (error) Can't open quota file for id 101, maybe you need to reinitialize quota: No such file or directory
vzquota setlimit failed [11]
Performing postcreate actions
VE private area was created

Can u tell me why?

Before compiling open vz to make a disk prtiton by using fdisk or cfdisk.Then edit the file /etc/fstab.
(eg: /dev/sda/ /vz ext3 defaults,noatime 1 2

Then mount it in /vz.
mount -a (This will mount all partitions)

Then during the compilation time make sure to enable quota support
then complete the rest of steps.

Good luck

Hello,

1) Make sure, that you booted in OpenVZ kernel (provide `uname -a` output)
2) Make sure, that vz service is started: `service vz status`

Thanks,
Vasily
