Hi

thanks to Kir helping me to setup a Suse 9.3 X86_64 Image.
You can download it here:
http://web150.dd01.profihoster.net/
(my real domain ronny-goerner.de will work again in 24h, sorry for that)

Thanks

Would be nice to get some feedback

Keep on Dev
Thanks + Regards,
Ronny

Hi Ronny,

Great work!

What do you think - would it be good to upload your stuff to some directory named like 'contributed' on download.openvz.org?

Hi

if you want, you can do. You also can Hard-Link it directly to my server - it ´s a little bit faster)))))
You can do both, too, if you want

If there is time, I will create a Suse 10.0 Image, too. Maybe I can do so until end of January,

Thanks
Ronny

Very cool, Ronny. Do you have one for us not yet on 64-bit?

Good Morning,
thanks for feedback . I will create a 32bit Version, if there is need, in some days. Currently, I´ve much work with a adminpanel. 90% are ready, but in German, first, only. I will do now templating for multi-language support

Regards,
Ronny

Just a quick question to get me started on a 32 bit Suse 9.3 template. How did you start out with the base layout? Did you use the rescue files on the install/boot disk from OpenSuse? Thanks
