Subject: Unable to open pty

Hi, I created a new VE today, and was configuring it and all was going well until I restarted it and I am now unable to either enter it with:

vzctl enter 107

Or ssh into the VE.

When I try to enter the VE I get this error.

Enter into VE 107 failed
Unable to open pty: No such file or directory

When I try to ssh into the VE I get this error:

ssh: connect to host academic.umfk.maine.edu port 22: Connection refused

I found the bug in bugzilla with someone with a similar issue with Ubuntu.
http://bugzilla.openvz.org/show_bug.cgi?id=398

with the latest kernels, etc...

In Bugzilla it says the issue has to do with showconsole, but I searched the /etc/ directory for showconsole and did not find any init scripts with a reference to showconsole.

Everything else on the VE seems to be running just fine, but I need to get access to it.

And this did not allow me to access it.

The problem seemed to arise after I configured winbind and smb to start on

Does anyone know how to fix this problem.

Thanks,

Romeo

http://wiki.openvz.org/VPS_enter_failed should help.

Perhaps ssh is not running or firewalled.

Romeo,

most likely some /dev files were deleted inside your VE.
to check:
ls -la /vz/root/<VEID>/dev

try searching forum for "ptmx" and "pty".

Yes, copying the /dev directory from a working VE to the non-working VE
fixed the problem. I can now login to the VE successfully.

Thank you,

Romeo
