Are you trying to install slocate inside VE?
Even root is limited by VE disk limit.
run:
df -h
inside VE.

to increase disk quotas use:
vzctl set <VEID> --diskspace N:M --save

Thanks,
Kirill

Subject: [Users] strange problem with quota when try to install using rpm

i had problem when installing an rpm, below is the screen capture:

rpm -ivh slocate-2.7-13.el4.6.i386.rpm
Preparing...   ### [100%]
   1:slocate   warning: /etc/updatedb.conf created as /etc/updatedb.conf.rpmnew
[100%]
error: unpacking of archive failed on file /usr/bin/locate: cpio: chown failed - Disk quota exceeded

i run it as 'root', how come root have quota limit?

running 'quota' will result:

quota

Disk quotas for user root (uid 0): none

Best Regards,
Markus

yes, it is inside VE and the disk free space is still very big, the VE have 40GB and only use 2.7GB:

Filesystem Size Used Avail Use% Mounted on
/dev/simfs 40G 2.7G 38G 7% /
/tmp 40G 2.7G 38G 7% /var/tmp
Best Regards,
Markus

Hello,

For me it seems to be strange too... Can you, please, post the output
of /proc/user_beancounters here in order to see which VE allocates so
much memory.

Thanks,

Vasily.

(ignore previous answer, it was for another letter...)

Hello,

can you do the following actions, please:

vzctl stop <veid>
Stopping VE ...
VE was stopped
VE is unmounted
vzquota drop <veid>
vzctl start <veid>
Starting VE ...
Initializing quota ...
VE is mounted
Setting CPU units: 1000
VE start in progress...

After that try to install/extract files in VE as you did in previous
attempts. If these actions still fail, please post here the output of
the following commands:

vzquota stat <veid>
vzctl exec <veid> df
cat /etc/vz/conf/<veid>.conf
cat /etc/vz/vz.conf
uname -a

Thank you,
Vasily
