
Subject: NFSv3 client OOPS during LTP test
Posted by [den](#) on Tue, 15 May 2007 10:52:20 GMT
[View Forum Message](#) <> [Reply to Message](#)

Hello, All!

I have run LTP over NFSv3 with O_DIRECT support with the default mount options:

```
artemis ~/src/linux-2.6.21.1 $ cat /proc/mounts | fgrep nfs
192.168.1.9:/home/den/tmp /mnt nfs
rw,vers=3,rsize=131072,wsize=131072,hard,proto=tcp,timeo=600
,retrans=2,sec=sys,addr=192.168.1.9
0 0
artemis ~/src/linux-2.6.21.1 $
```

The result is an OOPS during "diotest4" testcase, which is 100% triggered in less than 30 seconds:

```
Unable to handle kernel NULL pointer dereference at 0000000000000000 RIP:
