Subject: *RESOLVED* network access between VE and HN

It appears that, by default, a VE can access the HN using networking. (pinging to the HN's external ip works).

How can I turn that off? The VE should have access to the internet (I'm SNATTING), but not to the HN, unless that traffic passes through the same firewall rules that apply to traffic coming from the internet directly for the HN (like ssh for the HN).

Anyone?

Thanks!R

Why not use iptables on venet interface on HN?

Vasily.

Oops, It appears that I was trying to block it in the FORWARD chain, instead of the INPUT chain. Now it works:)

Thanks!
