Subject: Perl CPAN problems

I'm having strange problems with installing perl modules and CPAN. When I try to install Bundle::CPAN and a lot of other modules I get various make errors. Using FC6 as VE. I don't seem to have this problem on dedicated boxes running FC6.

I know this isn't a lot of good info to troubleshoot this but just wondering if there's something obvious I'm missing.

Quote:I get various make errors

Anything specific?..

CPAN.pm: Going to build P/PM/PMQS/Compress-Raw-Zlib-2.004.tar.gz

Parsing config.in...
Building Zlib enabled
Auto Detect Gzip OS Code..
Setting Gzip OS Code to 3 [Unix/Default]
Looks Good.
Up/Downgrade not needed.
Checking if your kit is complete...
Looks good
Writing Makefile for Compress::Raw::Zlib
-- NOT OK
Running make test
Can't test without successful make
Running make install
make had returned bad status, install seems impossible
Running make for P/PM/PMQS/IO-Compress-Zlib-2.004.tar.gz
Is already unwrapped into directory /root/.cpan/build/IO-Compress-Zlib-2.004

CPAN.pm: Going to build P/PM/PMQS/IO-Compress-Zlib-2.004.tar.gz

-- NOT OK
Running make test
Can't test without successful make
Running make install
make had returned bad status, install seems impossible
Running install for module IO::Compress::Gzip
Running make for P/PM/PMQS/IO-Compress-Zlib-2.004.tar.gz
