Hello,

I am using the rpm builds, the current rpm build has several bugs such as the iowait which were fixed, can you release a new rpm build? Thank you.

It'll be released very soon!.. At the moment it is in testing.

Vasily.

We switched to 028.035 kernel since we found a serious bug while testing 028.34. Now 028.035 kernel is in testing. Even if it will successfully pass testing, I'm afraid, it'll be released only next week... BTW, you can compile the kernel using sources from git... (git.openvz.org)

Sorry for inconvenience,
Vasily.

I just compiled 35 and it's missing DRBD-ouch!

Sources in git does not content DRBD! This patch is added later while RPM is building.
