I created/updated vztmpl for Fedora Core.

http://multik.org/vztmpl-fedora-7-1.1-1.i386.rpm
http://multik.org/vztmpl-fedora-7-1.1-1.src.rpm
http://multik.org/vztmpl-fedora-core-6-1.2-1.i386.rpm
http://multik.org/vztmpl-fedora-core-6-1.2-1.src.rpm

Two big differences from 'official' vztmpl for FC4:
1) I add "small" branch. No unnecessary rpm for usual use. So no sshd, no httpd, etc
2) In other branches, no default start for sshd, httpd, etc.

Thank you for your contribution. I placed your packages to
http://download.openvz.org/template/metadata/contrib/

Thanks,
Vasily.
