Hi,

There is weird behavior with some of my openvz servers, regarding time.

[root@ve~]# date
Thu Jul 12 06:59:15 EDT 2007

One log entry in maillog:
Jul 12 14:46:06 ve sm-msp-queue[30376]: starting daemon (8.13.1): queueing@01:00:00

Funny thing is that if I use logger, the date is OK.

Jul 12 07:00:26 vz01 ugob: hello!

Any ideas on how to diagnose this?

Thanks,

Ugo

Hi,

have you (re)set you timezone in VE, after your sendmail has started ?

Hi,

I found that there was

TZ='America/Montreal'; export TZ

in /etc/profile

of most of my VZ running on that server.

I deleted this line, restarted sendmail, same problem.
I restarted the VE, same problem,
I restarted the HN, same problem.

I remember playing with TZ in my beginnings with OpenVZ, because the clock wasn't set correctly, I think.

Thanks,
Ugo
