Subject: Which kernel to use?

Hello Everyone -

This may be a silly question but I wanted to confirm with the experts on this board to make sure our upgrade is correct.

We have a CentOS 4.5 hardware node with 4gb ram running ovzkernel-smp-2.6.9-023stab044.4. We are planning to add additional ram but I'm not sure if I need ovzkernel-enterprise or ovzkernel-entnosplit. Which one should I use?

Thanks!

You`ll need to use the enterprise one. Anything over 4 GB will need enterprise.

You can try to use x86_64 smp kernel (it required 64-bit OS on hardware node)
