Hi,

I have been trawling the web for a free web based amin panel to test a few VE before putting into a production enviroment.

I saw this one:

http://forum.openvz.org/index.php?t=tree&th=230&mid= 1058&&rev=&reveal=

Was just wondering is there were any free ones out there, not HyperVM or the inproduction RoboVZ.

I would mind creating a simple one, but need to look at some code first.

Thanks

I know this is not the answer you were looking for but i am making a free one as well. I just started on it last night, but i already have it controlling the vps.

The code is fairly simple and easy to understand.

I know its a bit cheeky but could I have a look, I have been wanting to work on something like this for a while.

If you PM me or email me I would really appreciate it.

Thanks

Hypervm is quite good actually, you only pay per VPS, it`s like 0.5c per vps, rest is free.

Yeah I saw that.

Webmin is a good tool.

However I was looking for one where users could login and start / stop their own vps.

Probably have to code my own.

Cheers

OR you can start implementing a backend to convirt (http://xenman.sf.net/).

OR you can join the work on libvirt/virtmanager, which is already in progress. http://libvirt.org/
