Subject: Huge problem with baselayout-vserver after update...

Hi,
I'm running gentoo with vserver-sources. I updated my baselayout with baselayout-vserver, then etc-updated everything in init.d (actually, I just kept the hostname et domainname in conf.d as they were).
At reboot, the machine crashed with problems of scripts : could not create 'softscripts' and others... immediately after the hardware boot (at the beginning of gentoo loading).

Well, rebooted with a rescue disk, chrooted and unmerged baselayout-vserver to reinstall the former baselayout (not vserver). I etc-updated again, checking each file (18 this time, 21 the firt time).
I recompiled the kernel too, with the same config file.

Now, the machine loads okay but stops after starting services with the message 'INIT :no more scripts left for this runlevel' and then hangs... I never get to the prompt, and I can't access /var/log/messages or syslog...

What can I do to get back my configuration ?
I fear emerge -e world (took me three days last time). Nothing else ?

Thanks in advance for your help !

(1) Are you using OpenVZ or Linux-VServer? This is OpenVZ support forum.

(2) baselayout-vserver is just for the VPSs (guests), not the host system itself. So looks like you made a BIG mistake.

(3) Check basic stuff like /etc/inittab -- initdefault should be set to 3 or 5, there should be some getty lines there etc.

Oops. Sorry. I just followed the link from front page and asked the question without thinking... I'm using linux-vserver, as you guessed right.

Well, I'll check inittab. Didn't know this baselayout was for guests : I saw it had been merged in another machine I'm copying, so I guessed it was something I had forgotten. Hm, big mistake that is.
Well, I'll try and fix it.

Sorry again for posting in the wrong forum.

don't worry about your post BTW, you can try OpenVZ as well
