Here are a few pidspace patches I have been working on
and would like to seek comments on before sending them
to LKML.

Some of these were included in 2.6.20-rcX-mm1 but were
dropped due to some collisions. Andrew wanted us to
retest and send them out.

Some were already reviewed earlier once either on containers
(eg: autofs, struct pid param to attach_pid()) or by maintainer
(pidspace coda).

Appreciate your comments.
