Hi the big problem here

My server contain 3 GB ram

I create vps. user
After I login inside of vps. user and I type free I see all memory from the host server
That is very bad idea!! people see your resource
Please guys help me to hidden the host memory size and show the real size that I assign to the vps
URGENT
Best regards
MAX
.

This is actually not a bug, but more of a "misfeature" -- /proc/meminfo is not yet virtualized.

VPS is still allowed to use as much memory as specified by its configuration (user beancounters parameters).

PS if you want to post some comments to the bug -- you'd better do it in bugzilla not here.
