Ok. I don't see any patches in -mm so I was assuming these patches have
not been queued up anywhere.

As long as these things happen in a reasonably timely manner so I can
remove the export of kernel_thread and kill daemonize I really don't care.

If you have written them they are quite likely better then my minimal
patches which were quite restrained because of my limited ability to
test these things.

Eric

They haven't been quite yet. Is it your intention to kill these features in
2.6.22?
