
Subject: [PATCH -mm 1/2] user namespace : add unshare
Posted by [Cedric Le Goater](#) on Fri, 08 Jun 2007 15:14:07 GMT
[View Forum Message](#) <> [Reply to Message](#)

Basically, it will allow a process to unshare its user_struct table, resetting at the same time its own user_struct and all the associated accounting.

A new root user (uid == 0) is added to the user namespace upon creation. Such root users have full privileges and it seems that these privileges should be controlled through some means (process capabilities ?)

The unshare is not included in this patch.

Changes since [try #4]:

- Updated get_user_ns and put_user_ns to accept NULL, and get_user_ns to return the namespace.

Changes since [try #3]:

- moved struct user_namespace to files user_namespace.{c,h}

Changes since [try #2]:

- removed struct user_namespace* argument from find_user()

Changes since [try #1]:

- removed struct user_namespace* argument from find_user()
- added a root_user per user namespace

Subject: Re: [PATCH -mm 1/2] user namespace : add unshare
Posted by [Cedric Le Goater](#) on Fri, 08 Jun 2007 15:22:38 GMT
[View Forum Message](#) <> [Reply to Message](#)

oops, wrong subject. it should be :

"user namespace : add the framework"

Sorry about that,

C.
