I have tried several times to install plesk in a VPS.. everything is working great. I have set Selinux to disabled but come to an error on the same package, ive even tried creating a new vps to try again without luck.. the first error i got was this one

/root/psa/PSA_7.5.4/FC3_std.updates/tomcat4-webapps-4.1.24-f ull.2jpp.noarch.rpm: V3 DSA signature: NOKEY, key ID 307a10a5

Installing packages
Installing perl-URI-1.30-4.noarch.rpm
error: unpacking of archive failed: cpio: lsetfilecon failed - Bad file descriptor
Not all required packages were installed.

I fixed the NOKEY error, then got this error

Installing packages
Installing perl-URI-1.30-4.noarch.rpm
error: unpacking of archive failed on file /usr/lib/perl5/vendor_perl/5.8.5/URI/urn/isbn.pm;43320d9e: cpio: lsetfilecon failed - No such file or directory
Not all required packages were installed.
Press <ENTER> to continue...

same package, but different error. any ideas?

thanks

Do you restart your VPS after SELinux disabling?

I also have this problem. I am using the FC3 template, and it's not working. There is no /etc/selinux/config on the version of FC3 I'm using (DL'd the metadata, vzpkgcache'd to generate the template, etc)

Any fixes for this yet? I'm having the same thing. tried both minimal and default caches and still can't install.

does it happen on FC3 only?
looks like a bug in FC3 tools...

Dev,

Yea but its a big deal, cuz right now I can't offer plesk at all. All the other distros doesn't work that you can use on openvz (at least that there are templates off) only ones I know of are fc3 fc4 centos4 and debian (I'm running a debian vserver now, I haven't put it into production still not sure if its stable with openvz) But even then so debian is the only OS with openvz that will work with plesk?

Doug

I too am trying to install Plesk. I figured I start out with a fresh CentOS VPS and the RHEL 4 plesk package. I received an error that my version of Plesk was not for CentOS 4. I changed /etc/redhat-release to RHEL4 and the installer at least started to install. After Plesk connected to the swsoft server the install stopped dead again saying there was no version for my OS. I also changed /etc/issue (not sure about this, from memory as I'm on the road) but there was no change, Plesk would not install. Anyone have any updates? Any success stories or suggestions on how to get Plesk installed?

Well to get plesk installed on Centos4

You have to download the large tar for rhel4 and do the rpm way unfortunately.

Thier autoinstaller doesn't support Centos.

I've done this many times with no issues.

scooter,

Would you mind writing a howto for the rpm install?

I can possibly try, i would need to setup a vps to redo a plesk install.

But unfortunately work has me covered up with ensim issues atm, so it won't be tonight.

It's late, i'd go into more detail but i'm about to pass out. Anyways, try this. It's for centos 4, YMMV:

cp /etc/redhat-release /root/
echo "Red Hat Enterprise Linux AS release 4 (Taroon Update 2)" > /etc/redhat-release

cp /etc/issue /root/
echo "Red Hat Enterprise Linux AS release 4 (Taroon Update 2)" > /etc/issue
echo "Kernel \r on an \m" >> /etc/issue

yum install apr apr-util aspell aspell-en bind bind-libs bind-utils bzip2-libs compat-db cracklib cracklib-dicts crontabs curl cyrus-sasl cyrus-sasl-md5 db4 distcache e2fsprogs expat file findutils fontconfig freetype gawk gd gdbm glib2 gmp grep httpd httpd-suexec info krb5-libs libc-client libcap libgcc libgcrypt libgpg-error libidn libjpeg libpng libselinux libstdc++ libtermcap libtool-libs libxml2 libxslt mailcap mailx make mktemp mod_perl mod_ssl mysql mysql-server ncurses ntp openldap openssh openssh-clients openssl openssl pam pcre perl perl-DBD-MySQL perl-DBI perl-Filter php php-imap php-mysql php-pear php-pgsql postgresql-libs python sed sharutils sysklogd tar tcp_wrappers termcap unzip vixie-cron webalizer which xinetd xorg-x11-Mesa-libGL xorg-x11-libs zlib

cd rpm_RedHat_el4/

rpm -Uvh *
cd ../opt/

rpm -Uvh ../Third_Party/perl-TimeDate-1.16-1.noarch.rpm
rpm -Uvh migration/psa-migration-manager-7.5.4-rhel4.build75050930.11 .i586.rpm
rpm -Uvh fp/frontpage-5.0-72psa.rhel4.i586.rpm

You get the gist...

Hello

I'll take care of this issue. Just sent all the details to Plesk guys.

Aistis

OPenvz and plesk are not compatible rpm issues
i been try all to install but don't work

i test Cpanel work ok
webmin
vhcs
syscp
all is ok
but the more import one plesk from swsoft

thanks

help help required plesk working to OPenvz
