I am trying to backup (with suspend/resume) a VEs on the host machine, but it failed with this message:

Can not suspend VE: Invalid argument
unsupported fs type rpc_pipefs
Checkpointing failed

Any idea?

I'm having the same problem:

$ sudo vzctl --skiplock chkpnt 101 --suspend
[sudo] password for raziel:
Setting up checkpoint...
suspend...
Can not suspend container: Invalid argument
Error: unsupported fs type rpc_pipefs
Checkpointing failed

dmesg shows:
CPT ERR: ffff880062194000,101 :unsupported fs type rpc_pipefs

mount shows:

rpc_pipefs on /var/lib/nfs/rpc_pipefs type rpc_pipefs (rw)

any idea?
