Looking at the GIT tree it looks like 2.6.22-ovz004 was released 4 days ago. That should have the fixes for netfilter, correct? Any idea when it's going to appear on the site? I need 2.6.22 for the TCP_MD5SUM option (for bgp route advertising) and I need ovz004 to get netfilter going.

I've also noticed that CONFIG_IPV6_SIT is not set in the 2.6.22 (or other development) builds. Anyone know if there is some problem there? Yes, I need that too and will probably end up recompiling the kernel just for that - it'ss default enabled in the EL kernels and Fedora kernels.

Mike

Should be clear from GIT log. Well, I don't see any. Do you mean some known bugs? Any bug ##s?

We release kernels only after QA is done, more to say, we do not release every kernel we tag in GIT.

For ovz004 it's still in progress, we're aiming for next week.

Just file a bug asking to enable this option, telling why you need it
and which kernels have it enabled.
