Subject: Configuring a useless veth

Hi,

I'd need an interface with a MAC address for some application that I run within a VE. I currently use venet as interface:

(in 105.conf)
IP_ADDRESS="192.168.2.205"

How could I configure a veth device, but not use it? I don't need any of the features of veth, except its MAC address. Everytime I try switching my config to veth, it screws my config and the VE becomes unreachable, I have to restore from a backup.

Regards,
Ugo

Hi Ugo,

do you mean that you have a working VE which uses venet, then you issue

vzctl set $VEID --netif_add eth0 --save
and VE became not reachable? Well, i checked, this algorithm works for me...

Hmmm, it works. I don't know exactly how I lost that, but it looked so complex to make it persistent and so on...

I'll try to install my G.729 codec now .

Thanks a lot!
