Subject: [PATCH 0/4] Fix race between sk_filter reassign and sk_clone()
Posted by Pavel Emelianov on Wed, 17 Oct 2007 09:45:54 GMT
View Forum Message <> Reply to Message

The race can result in that some sock will get an sk_filter
pointer set to kfree-d memory. Look

```
CPU1:                       CPU2:
sk_clone():                  sk_attach_filter():
  new_sk = sk_alloc(...);
  sock_copy(new_sk, sk);
  /* copies the filter ptr */
  ...
  filter = new_sk->sk_filter;
  if (filter)
                            old_fp = sk->sk_filter;
                            ...
                            sk_filter_release(old_fp);
                              if (atomic_dec_and_test(&old_fp->refcnt))
    atomic_inc(&filter->refcnt);
                                /* true */
                                call_rcu(&fp->rcu, kfree);
```

that's it - after a quiescent state pass the new_sk will have
a pointer on kfree-d filter.

The same problem exists for detaching filter (SO_DETACH_FILTER).

The proposed fix consists of 3 preparation patches and the fix itself.

Subject: [PATCH 1/4] Introduce the sk_detach_filter() call
Posted by Pavel Emelianov on Wed, 17 Oct 2007 09:47:31 GMT
View Forum Message <> Reply to Message

Filter is attached in a separate function, so do the
same for filter detaching.

This also removes one variable sock_setsockopt().

Subject: [PATCH 2/4] Move the filter releasing into a separate call
Posted by Pavel Emelianov on Wed, 17 Oct 2007 09:49:38 GMT
View Forum Message <> Reply to Message

This is done merely as a preparation for the fix.

The sk_filter_uncharge() unaccounts the filter memory and calls
the sk_filter_release(), which in turn decrements the refcount
anf frees the filter.

The latter function will be required separately.

Subject: [PATCH 3/4] Cleanup the error path in sk_attach_filter
Posted by Pavel Emelianov on Wed, 17 Oct 2007 09:51:11 GMT
View Forum Message <> Reply to Message

The sk_filter_uncharge is called for error handling and
for releasing the former filter, but this will have to
be done in a bit different manner, so cleanup the error
path a bit.

Subject: [PATCH 4/4] Fix the race between sk_filter_(de|at)tach and sk_clone()
Posted by Pavel Emelianov on Wed, 17 Oct 2007 09:53:40 GMT
View Forum Message <> Reply to Message

The proposed fix is to delay the reference counter decrement
until the quiescent state pass. This will give sk_clone() a
chance to get the reference on the cloned filter.

Regular sk_filter_uncharge can happen from the sk_free() only
and there's no need in delaying the put - the socket is dead
anyway and is to be release itself.

Looks good, applied.

Thanks for fixing this bug Pavel!

Looks like this might be causing problems, at least for me on ppc. This
happened during a normal boot, right around first interface config/dhcp
run..

```

--- Exception: c01 (System Call) at 000000000ff618d8
SP (fffdf040) is in userspace
0:mon>
```

I.e. null pointer deref at sk_filter_delayed_uncharge+0x1c:

```
0:mon> di $.sk_filter_delayed_uncharge
c000000000435e40  7c0802a6      mflr    r0
c000000000435e44  fbc1fff0      std     r30,-16(r1)
c000000000435e48  7c8b2378      mr      r11,r4
c000000000435e4c  ebc2cdd0      ld      r30,-12848(r2)
c000000000435e50  f8010010      std     r0,16(r1)
c000000000435e54  f821ff81      stdu    r1,-128(r1)
c000000000435e58  380300a4      addi    r0,r3,164
c000000000435e5c  81240004      lwz     r9,4(r4)
```

That's the deref of fp:

```
static void sk_filter_delayed_uncharge(struct sock *sk, struct sk_filter *fp)
{
        unsigned int size = sk_filter_len(fp);
...
```

That is called from sk_attach_filter():

```
...
        rcu_read_lock_bh();
        old_fp = rcu_dereference(sk->sk_filter);
        rcu_assign_pointer(sk->sk_filter, fp);
        rcu_read_unlock_bh();

        sk_filter_delayed_uncharge(sk, old_fp);
        return 0;
...
```

So, looks like rcu_dereference() returned NULL. I don't know the
filter code at all, but it seems like it might be a valid case?
sk_detach_filter() seems to handle a NULL sk_filter, at least.

So, this needs review by someone who knows the filter, but it fixes the
problem for me:

I've applied this for now to my net-2.6 tree, thanks Olof
for tracking this down.

Pavel please take a look at this and let me know if it should
fixed in some other way.

Thanks!

Yes. The NULL filter is a valid case, when there are no
filters attached at all. So this fix is correct.

Thanks, Olof. Sorry, Dave :(
