hi all

i have make scripts with exec to make restart vps (s)

with this script i can do all thing (start , restart) server but i can't do vzctl restart 101 in " error_log " found

" Please check that vzdev kernel module is loaded and you have sufficient permissions to access the file.
Unable to open /dev/vzctl: Permission denied "

if i run php script inside server php restart.php its work but via apache not work
---
[root@test logs]# ls -la /dev/vzctl
crw------- 1 root root 126, 0 Nov 4 21:49 /dev/vzctl
[root@test logs]#
---
kernel : 2.6.9-023stab044.11-enterprise
by : rpm

grant the user (restricted) sudo access then run your commands as "sudo command"

thx FooDog

i'm do sudo and error_log change to

" Password: "

and i was login to vps and make " PermitRootLogin yes "

and sshd restart and try its same error " Password: "

i w8 all

read up on sudo(man sudoers) and look for "NOPASSWD:"
ex:(from man page)Quote: ray rushmore = NOPASSWD: /bin/kill, /bin/ls, /usr/bin/lprm

oh, the apache server isn't on the hardware node.
i think you need to setup passwordless ssh.Quote:ssh-keygen -t rsa
scp .ssh/id_rsa.pub someuser@hardwarenode:.ssh/authorized_keys

then in php have:Quote:system("ssh -n -F /home/someuser/.ssh/config -i
/home/someuser/.ssh/id_rsa someuser@hardwarenode 'sudo /usr/sbin/vzlist'");

Hi,

have you setup your sshd to use the .ssh/authorized_keys ?
