Hello,

I am in project of the end of etude and I am has the search for concerning technical information openvz.

What is what he(it) works with Kernel 2.4.x ?

How work with the memoire ram?
how many card network I want by vps ?
That modify you it at the level of Kerne?

Thank you for your help

Eric

OpenVZ based on 2.6 kernels only.

You may check our code at git.openvz.org 'commit by commit' and find out
required information. Or you may find this information in our User Guide -
http://download.openvz.org/doc/OpenVZ-Users-Guide.pdf

> how many card network I want by vps ?
Zero. You will have virtual network device for each VPS, which is sufficient.

> That modify you it at the level of Kerne?
exactly.

For more information:
http://openvz.org/documentation/

Thanks,
Dmitry.
