Subject: [PATCH net-2.6.25 1/6][CORE] Remove unneeded ifdefs from sysctl_net_core.c
Posted by Pavel Emelianov on Sat, 01 Dec 2007 12:57:13 GMT
View Forum Message <> Reply to Message

They include the whole file, but it is already compiled
out when SYSCTL=n, since it is obj-$(CONFIG_SYSCTL) target
in the Makefile.

Pavel thanks for sending these patches. Might I ask

for some level of acknowledgement when you rework one of
my patches and send it off.

I suppose this could be a case of duplicate thinking but
this patch looks very familiar.

Eric

Sure. I though I've been doing exactly this thing. I've said
that unix ctls were from your tree and so on.

Hm... Do you mean that this one is from your tree? Sorry then,
I didn't know this. I can resend it with From: <you> if you wish.

> Eric

Thanks,
Pavel

Ok. I guess I must have overlooked that attribution.

It is. But I don't see any of this as needing a resend. Please
just don't forget me in the future is all I ask.

Eric
