I try to install cubepanel <http://www.cubepanel.com/>
in a VE under FC7
I obtain this message :
It has not been possible to activate quotas. Check that install file system is in /etc/fstab file.

I have activate quota with QUOTAUGIDLIMIT="500"

Linux cubepanel.xxxxxx 2.6.18-53.el5.028stab051.1

```
[root@cubepanel /]# mount
/dev/simfs on / type reiserfs (rw,usrquota,grpquota)
/proc on /proc type proc (rw)
/sys on /sys type sysfs (rw)
none on /dev/pts type devpts (rw)
```

Filesystem	1K-blocks	Used	Available	Use%	Mounted on
/dev/simfs	3800000	683564	3116436	18%	/

have you try ?
