Applied.

Please always put the subsystem name in the headline in
all capitals and surround it with brackets, like this:

[NETNS]: Blah blah blah.

Also treat the description line as a true English sentence, this means
capitalize the first word and put a period at the end of it. This is
a changelog message for a professional piece of software, not some
"innanet" slang talk on some IRC channel. :-)

I make these edits to every one of your patch submissions and it's getting tiring, I hoped you would notice this yourself before my needing to tell you about it explicitly :-)
