Subject: [PATCH 2.6.25] [IPV4] Reduce whitespaces in fib_rules.h.
Posted by den on Thu, 13 Dec 2007 14:17:28 GMT
View Forum Message <> Reply to Message

There are to many spaces between type and function name in the declaration
of fib rules manipulation routines. Eat them and save a couple of lines.

If this patch is going in, it would be nice to get rid of "extern" as
well.

 Alexey, who once removed all externs from prototypes
        and got 4 seconds compilation speedup.

The convention in the networking headers is to use extern, and
this is pretty consistently done across the board.

If we are going to do this, which I personally see no reason
for, we should do it across the whole networking.

Consistency is much more important than whatever reason you
could come up with to get rid of the 'extern'.

This is just noise and serves nothing other than to invite potential
patch conflicts which makes development harder.

If you happened to be changing these for other reasons, I'd say OK,
but not like this.

I will add parameter to these calls. The line will be too long after
that. I'd like to separate sense changes from, you perfectly correct,
useless changes :(

Could you still apply it, or I will need to send fully functional set to
you including this?

Please combine the changes so that when you change the args
you fixup the whitespace as well.
