Simple but useful. If anybody has further enhancements, that'd be spiffy.

Hi Gregor,

i suggest to use vzlist, insteed looking to /etc/vz/conf, so only
command will execute on running ve's and it's you dont like execute
command on VE 0, there's a 0.conf in /etc/vz/conf, too ;-)

for veid in `vzlist -Hoveid`; do vzctl exec $veid <command>; done

Bye,
Thorsten
