Hi,

Is there any script around with it I can check If irssi or bitchx running on VPSes and If yes on which VPS?

Regards

If they do not change process name, and you know some shell programming, it should be as simple as something like this:

```
for PROCNAME in bitchx irssi; do
   echo "Checking for ${PROCNAME}"
   PIDS=$(ps h -opid -C ${PROCNAME})
   for P in $PIDS; do
      grep envID: /proc/${P}/status
   done
   echo
done
```

Also you can use vzprocps (with -E option). You can found this package in the following directory: http://download.openvz.org/contrib/utils/
