Subject: NFS server inside VE

Hello everyone

I usually use the forum to solve my problems with OpenVZ, but now I really need to solve this problem urgently.
I must enable nfs server from one of virtual hosts. To be more precise must activates a pNFS. It seems that if the nfs server will also run pnfs.
Until now I can mount the exports of hardware node in the virtual hosts and everything seems ok. I read the short article "NFS server inside VE", but
did not understand how to patch the kernel to enable the VEs to start this service. I need the traditional nfs because the pnfs is an application that
runs on a layer above.
Thank you now.

P.S.: Excuse my poor English.

kernel level NFS server inside VE is not supported now.

Regards,
Den
