Hi All,

With a P4 2.4GHz, 4G RAM, 300G HD - How many VMs I can expect to run on
this machine configuration.
Also, I'll be interested to know what other type of HW configuration
specs others are using and how many VMs they are
able to run - In live production sites!
-joe

Joe, depends on applications inside VEs. You can run anywhere from 1 to
100 or more.

Joe,

Can you provide a hint: what are you planning to run inside?

Kirill
