Heya,

Currently I am uprading my CentOS-4 HN node with 70 CentOS-4 VEs running mainly LAMP stuff and I need a little advice.

Is it safe to upgrade new HN node to CentOS-5 and new kernel, and migrate CentOS-4 VEs or I should rather stay with CentOS4 on new HN node?

Do you think there should be any problems in CentOS-4 VEs, because HN would run newer version of CentOS?

Thanks in advance!

regards, Jernej
