
Subject: [PATCH 0/3 net-2.6.26] Compilation fixes.
Posted by [den](#) on Mon, 31 Mar 2008 15:46:01 GMT
[View Forum Message](#) <> [Reply to Message](#)

Hello, Dave!

Recently I have seen several issues post to the netdev@ blaming inclusion of the net_namespace.h from seq_file. This set fixes this problem after two small cleanups.

Regards,
Den

All applied, thanks Denis.

I'll push to net-2.6.26 after some build sanity checks.

Dave, could you pls consider this addition. This should fix problem reported by the Kamallesh Babulal <kamallesh@linux.vnet.ibm.com> recently.

[NETNS]: Declare init_net even without CONFIG_NET defined.

This seems bogus but there is no other way for now. There are several places when networking headers are included even without CONFIG_NET and the possibility of the similar reports in the nearest future is great.

Then this invalidates enormous amounts of CONFIG_NET tests
we've put into the headers over the past few days.

All of them were explicitly to avoid having to provide the
init_net symbol when CONFIG_NET is not set.

OK. do you suggest to insert another CONFIG_NET check into if_pppox
header or separate fs/compat_ioctl.c into two files:

- for net ioctls

- for the rest?

It's probably better to go your route. That is, unprotect
the init_net extern, and remove the CONFIG_NET's we added
which are no longer necessary.

Could you do such a patch set? Thanks.

Sure, but, unfortunately, only tomorrow morning. It is too late today in Moscow :)

pls consider this. I have found only 3 commits related

[NETNS]: Declare init_net even without CONFIG_NET defined.

This does not look good, but there is no other choice. The compilation without CONFIG_NET is broken and can not be fixed with ease.

After that there is no need for the following commits:

1567ca7eec7664b8be3b07755ac59dc1b1ec76cb

3edf8fa5ccf10688a9280b5cbca8ed3947c42866

2d38f9a4f8d2ebdc799f03eecf82345825495711

Revert them.
