Hello again

our linux systems running under OpenVz are giving a good performance. However, one of them reaches more than 50 Mbps and in these situations sistem turns unstable. Dmesg shows something like:

Apr 20 20:43:21 hn249-5 kernel: Orphaned socket dropped (156,624 in CT1981)
Apr 20 20:44:42 hn249-5 kernel: Orphaned socket dropped (275,550 in CTCT1981)
Apr 20 20:44:42 hn249-5 kernel: Orphaned socket dropped (271,542 in CTCT1981)

OpenVz kernel: Linux hn1981 2.6.18-53.1.6.el5.028stab053.6ent
Services: Apache 2.0 only static files(no php)
Failcnt: show 0 at all VES

Are there anyone with the same experience? Perhaps, tunning Apache or adding more resources to this VE will solve the problem ?

Thanks!

Hello,

http://forum.openvz.org/index.php?t=msg&goto=25080&&
amp;srch=Orphaned+socket#msg_25080
http://forum.openvz.org/index.php?t=msg&goto=3895&&a mp;srch=Orphaned+socket#msg_3895

I guess the problem is the same
