Hi, all,

I have a system(Debian) installed with Oracle 10g, then if I install an OpenVZ, can I contain that Oracle in a Virtual private server?

and how can I do so?

Warm regards,

Shawn D.

Yes, of course it's possible. I would advise You to look at the following
article in our wiki:
http://wiki.openvz.org/Oracle_10g_VE

thank you,
Vasily Averin

Hi Shawn,

To use Oracle inside Virtual private server You should install OpenVZ, create

new Container (i.e. new Virtual Private server), then install Oracle inside this container as described in our article.

thank you,
Vasily Averin
