Hi

I've been trying to use vzmigrate (-r no options) to migrate a VPS. So far it just sits snyching the private area - this can go on for hours with nothing happening (it does create the vps area on the destination node)

I then tried to use vzdump and get a similiar problem - nothing happens. Output of the vzdump log is simply:

Apr 22 10:24:28 INFO: starting backup for VPS 290 (/vz/private/290)
Apr 22 10:24:28 INFO: starting first sync /vz/private/290 to /vz/dump/tmp2970

how long should a 30gb vps take to backup?  Im using --suspend

thanks
