Subject: vzctl, venet, addip and multiple routing tables

Hello,
 in my setup I'm using multiple routing tables, and I would like vzctl
to add venet's ips also to those tables, in other words I would like this
entry:

321.573.12.963 dev venet0 scope link

to appear in table 'table1' and 'table2'.
I have been doing this in startup scripts:
 ip r a 321.573.12.963 dev venet0 table table1
 ip r a 321.573.12.963 dev venet0 table table2

but results are erratic.
 I found distro-specific scripts for setting up networking inside guest,
but I seem to be having problems with locating something similiar for the
host.
