Subject: Contolling the number of CPU cores used per VE

Dear People,

With OpenVZ, is it possible to control how many CPU cores are available for a particular Virtual Environment?

For example, on my hardware, when the HN boots, the Kernel sees 8 CPUs (2 quad-cores). Would it be possible to have 2 Virtual Environments with 3 cores dedicated to one and 5 cores dedicated to another?

Alex

you can do it via
vzctl set CTID --cpus <N>
