Subject: Able to install any OS Template except one

I can install every OS template apart from hostinabox, getting tons of errors about files being missing from the template packages.

Tried replacing the hostinabox template with a fresh copy but that didn't work.

Any suggestions on what to do?

Personally I prefers to build my own templates. Greetings =)

What is this hostinabox OS Template you are talking about? There isn't any hostinabox OS Template provided by the OpenVZ project that I'm aware of. I'd recommend you contact the producer of the problem OS Template and ask them.
