This Openvpn stuff is cursed. Started getting kernel oops. Moved the vpn to a different server and getting the same oops on the new server.

Kernel 2.6.24-ovz005.1

kernel: Oops: 0002 [1] SMP

Message from syslogd@vps8 at Jul 25 21:27:21 ...
kernel: CR2: 0000000000008050

Message from syslogd@vps8 at Jul 25 21:33:57 ...
kernel: Oops: 0002 [2] SMP

Message from syslogd@vps8 at Jul 25 21:33:57 ...
kernel: CR2: 0000000000008050

Message from syslogd@vps8 at Jul 25 23:08:07 ...
kernel: Eeek! page_mapcount(page) went negative! (-1)

Message from syslogd@vps8 at Jul 25 23:08:07 ...
kernel: page pfn = d

Message from syslogd@vps8 at Jul 25 23:08:07 ...
kernel: page->flags = 404

Message from syslogd@vps8 at Jul 25 23:08:07 ...
kernel: page->count = 1

Message from syslogd@vps8 at Jul 25 23:08:07 ...
kernel: page->mapping = 0000000000000000

Message from syslogd@vps8 at Jul 25 23:08:07 ...
kernel: vma->vm_ops = generic_file_vm_ops+0x0/0x60

Message from syslogd@vps8 at Jul 25 23:08:07 ...

Please open a new bug report in bugzilla, with kernel version and all the output from dmesg.
