Subject: iptables
Posted by vmvmvm on Thu, 31 Jul 2008 21:02:08 GMT
View Forum Message <> Reply to Message

Hello,

I've searched the archives and still not found a solution (though many are close).

Please forgive the (likely) easy to answer question:

My ve's cannot use iptables:

iptables v1.3.5: can't initialize iptables table `filter': Table does not exist (do you need to insmod?)
Perhaps iptables or your kernel needs to be upgraded.

lsmod shows:

```
# lsmod  | grep -i "tables"
ip_tables              18760  1 iptable_filter
x_tables               19204  10  ip_tables,xt_tcpudp,xt_length,ipt_ttl,xt_tcpmss,ipt_TCPMSS,x
t_multiport,xt_limit,ipt_tos,ipt_REJECT
```

and /etc/vz/vz.conf :

```
# grep -i tables /etc/vz/vz.conf
IPTABLES="ipt_REJECT ipt_tos ipt_limit ipt_multiport iptable_filter iptable_mangle ipt_TCPMSS
ipt_tcpmss ipt_ttl ipt_length"
IP6TABLES="ip6_tables ip6table_filter ip6table_mangle ip6t_REJECT"
```

What am I missing?

Thanks in advance.

Make sure iptables modules are loaded before openvz modules.

Thanks.

How do I determine the load order?

Thanks again.

First check it manually. Stop vz service (/etc/init.d/vz stop) and run iptables (/etc/init.d/iptables start). Check that iptables modules (such as ipt_filter) are loaded. Start vz service. Try using iptables from inside VE.

Thanks Kir, I followed the instructions and it seems to have worked, however, I didn't change anything and now I'm confused as to what I've done differently, except stopping the entire VZ service, I was just stopping the VE's earlier with vzctl stop 101. Anyway, here is the output, I can see iptable_filter but not ipt_filter, maybe the same mod?

First check it manually. Stop vz service (/etc/init.d/vz stop) and run iptables (/etc/init.d/iptables start). Check that iptables modules (such as ipt_filter) are loaded. Start vz service. Try using iptables from inside VE.

```
# /etc/init.d/vz stop
Shutting down VE 101
Bringing down interface venet0:                    [  OK  ]
Stopping OpenVZ:                                   [  OK  ]

# /etc/init.d/iptables start
Flushing firewall rules:                           [  OK  ]
Setting chains to policy ACCEPT: filter            [  OK  ]
Unloading iptables modules:                        [  OK  ]
Applying iptables firewall rules:                  [  OK  ]
Loading additional iptables modules: ip_conntrack_netbios_n[  OK  ]
```

```
# /etc/init.d/vz start
Starting OpenVZ:                                           [  OK  ]
Bringing up interface venet0:                              [  OK  ]
Configuring interface venet0:                              [  OK  ]
Starting VE 101:                                           [  OK  ]

# modprobe -l | grep ip
