Hey all,

I have a CPanel VPS that is complaining 25-30 times a day with this error:

iptables v1.3.5: Couldn't load target
`acctboth':/lib64/iptables/libipt_acctboth.so: cannot open shared object file:
No such file or directory

Try `iptables -h' or 'iptables --help' for more information.
iptables: No chain/target/match by that name
iptables: No chain/target/match by that name
iptables: No chain/target/match by that name
iptables: No chain/target/match by that name

I've asked CPanel support but they cannot help me.

Anyone know how I can fix this?
